RESPONSE TO AMENDMENT

1. Applicant's amendment filed 7 October 2003 is acknowledged. On entry of the amendment, claims 3, 4, and 6 will be pending and under examination. Upon further consideration, the finality of the previous office action is withdrawn. The text of those sections of Title 35, U.S. Code, not included in this action can be found in a prior office action.

Claim Rejections Withdrawn

2. The rejection of claim 10 under 35 U.S.C. 112, first paragraph, is withdrawn in response to Applicant's cancellation of this claim.

New Grounds of Rejection

3. Claims 3, 4, and 6 are newly rejected under 35 U.S.C. 112, first paragraph, as lacking enablement commensurate in scope with the claims.

These claims are drawn to methods of detection of "an IGF-1 receptor interacting protein" using SEQ ID NO: 5, a complement, or a sequence that hybridizes to either. There is no limitation either in the claims or in the specification as to what constitutes "an IGF-1 receptor interacting protein", there is no requirement that the complement be full length, and no hybridization conditions are specified. Since the complement could be any length at all, since the hybridizing conditions encompass potentially any DNA molecule, molecules within the scope of the claims could detect virtually any molecule. Since the molecules to be detected are not limited to molecules that would hybridize with SEQ ID NO: 5 or the full-length complement thereof, any target identifiable as an IGF-1 receptor interacting protein, including those known in the prior art and those not enabled by the specification, would be within the scope of the claims. Thus, essentially any molecule could be used to detect any nucleic acid that might be identifiable

as an IGF-1 receptor interacting protein. Similar issues were raised in the rejection of 23 August 2002, which was erroneously withdrawn because Applicant overcame only part of the basis for the rejection. Applicant has argued in the response of 24 February 2003 that hybridization conditions are described. However, no conditions are specifically required. The provision of art-standard techniques does not serve to enable the full scope of the invention, but is rather an invitation to the artisan to experiment to implement the invention as broadly claimed.

NO CLAIM IS ALLOWED.
